

## Two-domain master showcase

**Live AI interprets meaning.  
Roots decide. Corridors constrain.  
Evidence replays offline.**

# The problem is not intelligence. It is authority.

**THE OPPORTUNITY**  
Compare preferences  
Interpret policy  
Explain risk  
Surface ambiguity

**THE BOUNDARY**  
No authority  
No permission  
No spending or release  
No final decision

Semantic contribution → local validation → Root authority → bounded execution → verifiable evidence.

## The transaction begins with a person, not a module

**PAR → LIM**  
**12 AUG 2026**  
**CLIENT 001**

**HARD RULES SATISFIED**  
Lower price preferred  
Window seat preferred  
Private references remain sealed

**MOCK / EVIDENCE-ONLY WORKFLOW**  
**NO REAL BOOKING · NO REAL PAYMENT · NO REAL TICKET**

# Meaning moves forward; authority stays separated

## SEMANTICS

## VALIDATION

## AUTHORITY

## EVIDENCE + VERIFY

## Twelve live models examine one bounded transaction

**Tri-Party Orchestrator**

**Semantic Architect**

**Client Purchase Intent**

**Client Privacy**

**Airline Offer Policy**

**Fare Rules Cell**

**Seat & Baggage Cell**

**Ticketing Policy**

**Bank Payment Policy**

**Idempotency Risk Cell**

**Payment Status Explainer**

**Cross-Root Consistency**

**12 live calls · 12 local PASS ·  
every output remains advisory**

## Why Offer 001 won

### CLIENT INTENT

**Lower price**  
**Window seat**  
**All hard rules intact**

### MODEL RESULT

**Offer 001**  
**EUR 24 cheaper**  
**Window seat included**  
**Both offers hard-compatible**

**LOCAL CHECK · PASS**  
**ROOT KEPT THE FINAL DECISION**

## Useful reasoning did not require raw passenger or payment data

### PRIVACY RULE

**No raw passenger data**  
**No raw payment data**  
**Sealed references only**

### MODEL RESULT

**Opaque encrypted tokens**  
**Bounded private fields**  
**Data minimization preserved**

**PUBLIC-SAFE OUTPUT ONLY**  
**SECRET SCAN · PASS**

## Airline policy stayed conditional until the required parties agreed

### **AIRLINE CHECKS**

**Offer policy**

**Fare rules**

**Seat + baggage**

**Ticketing boundary**

### **MODEL RESULT**

**Advisory evidence only**

**Ticket evidence stayed conditional**

**Hold + bank + client required**

**NO MODEL CREATED A HOLD, TICKET, OR PERMISSION**

## The bank-side models explained risk without moving money

### **BANK CHECKS**

**Mock authorization**

**Consent verified**

**Sealed references**

**Duplicate + expiry risk**

### **MODEL RESULT**

**Authorization reviewed**

**Settlement kept separate**

**Receipt stayed evidence only**

**NO SETTLEMENT · NO REAL PAYMENT · NO BANK AUTHORITY**

## The LLM influenced the route — never the authority

**THE LLM COULD INFLUENCE**  
Offer comparison  
Preference matching  
Privacy interpretation  
Policy review  
Risk explanation  
**Which evidence required further review**

**THE LLM COULD NOT CREATE**  
Authority or permission  
A Root final  
A payment or settlement  
A booking or ticket  
A receipt with authority  
Any real-world effect

## Three sovereign Roots

**ClientRoot**  
client constraints  
purchase intent  
client acceptance  
final client decision

**AirlineRoot**  
offer resolution  
hold boundary  
ticket-intent boundary  
final airline decision

**BankRoot**  
authorization boundary  
payment evidence  
final bank decision

**LLM ≠ validator ≠ reviewer ≠ Root ≠ Anchor ≠ Replay**

## Only a Root-created path could enter the mock Corridor

**Hold packet**

airline\_hold\_commit\_packet:semantic\_causal:001

**Client intent**

client\_purchase\_intent:client\_001:001

**Bank evidence**

bank\_payment\_authorization\_ref:mock\_bank\_a:001

**Ticket intent**

airline\_ticket\_issue\_commit\_packet:mock\_airline\_al:001

**Ticket evidence**

mock\_ticket\_receipt:mock\_airline\_al:001

**Purchase evidence**

mock\_purchase\_receipt:client\_001:001

**Root finals**

client\_root\_final:001 | airline\_root\_final:001 | bank\_root\_final:001

**MOCK EVIDENCE ONLY · NO REAL TICKET / BOOKING / PAYMENT**

## Receipts preserve trace — not permission

### OFFER HOLD RECEIPT

Owner · AirlineRoot

Scoped hold packet

Evidence only

PASS · 0 effects

### TICKET RECEIPT

**0**  
**fallbacks**

**PASS**  
**source status**

**PASS**  
**offline Replay**

## Causal Ledger · 19 / 29 / 3

**19 artifacts**  
**29 dependency edges**  
**3 Root finals**

Blue · ClientRoot  
Teal · AirlineRoot  
Violet · BankRoot  
Amber · advisory evidence

**Every dependency points  
backward.**

**The evidence was frozen, anchored, and replayed without another model call**

**Publication and Replay provider / network / Gemini / effects: 0 / 0 / 0 / 0**

## The wording changed; the authority geometry did not

### ATTEMPT 03

Offer 001 was materially cheaper  
and included a window seat.  
Offer 002 did not.

12 · 3 · 1 · 3 · 0

### ATTEMPT 04

Both offers met hard constraints.  
Offer 001 was EUR 24 cheaper  
and included a window seat.

12 · 3 · 1 · 3 · 0

## A second domain asks a harder question: who must remain blocked?

**WATER FILTER  
SUPPLY  
Warehouse  
Suppliers  
Legal  
Accounting  
Bank**

**BOUNDARY TEST  
Supplier A · limited mock path  
Supplier B · BLOCKED  
Shipment · HELD  
Evidence ≠ authority**

**EVIDENCE-ONLY DEMONSTRATION  
NO REAL PAYMENT · NO REAL SHIPMENT**

## Six live models proposed meaning; six deterministic boundaries controlled it

**Top-Level Orchestrator**

**Semantic Architect**

**Legal Clause Extractor**

**Accounting Mismatch**

**Supplier B Note Interpreter**

**Bank Policy Reviewer**

**BSEP**

**Local Validators**

**Root Authority**

**Scoped Packet**

**Mock Corridor**

**Evidence Receipt**

6 live calls · 6 local PASS · every  
semantic output remained  
advisory

## Corrected evidence triggered a new review

SEMANTICS

VALIDATION

ROOT

REJECTED

**S-F3**  
Receipt attack  
REJECTED

**S-M1**  
Integrated outcome  
MIXED

5 S1 rows

4 negative rows

0 new calls / effects

**B BLOCKED · SHIPMENT HELD**

## The second domain closed through the same freeze-and-verify law

**S2/S3 provider / network / Gemini / effects: 0 / 0 / 0 / 0**

## The domain changed. The authority law did not.

### WHAT CHANGED

12 LLM vs 6 LLM

Airline vs supplier flow

Three-party vs procurement

PASS vs MIXED outcome

Domain-specific contracts

### WHAT DID NOT CHANGE

Root authority

Advisory semantics

Local validation

Bounded Corridor

Evidence-only receipts

Offline Replay

Zero effects

Different actor counts and different business outcomes did not change the separation between meaning and authority.

## X1 reconstructed the shared claim from committed evidence

**Airline Replay**

**PASS**  
**Supplier Replay**

**CLOSED\_PASS**  
**X1 audit**

## AI participation without AI sovereignty

**AI may shape meaning.  
It never receives authority over data,  
money, permissions, or party decisions.**

## 01 · tri\_party\_airline\_orchestrator\_llm

### PUBLIC-SAFE SUMMARY · 1/3

Interpretation of the tri-party transaction goal as an airline ticket purchase from Paris (PAR) to Lima (LIM) for August 12,

### PUBLIC-SAFE SUMMARY · 2/3

2026, for client\_001. The proposed bounded semantic route for BSEP creation involves establishing transaction context, identifying core travel parameters, and

### PUBLIC-SAFE SUMMARY · 3/3

preparing for subsequent BSEP generations related to availability, pricing, booking, and payment, all within a pending or transaction-level state.

VALIDATION · PASS  
ACCEPTED · TRUE  
ADVISORY ONLY  
AUTHORITY · FALSE  
PERMISSION · FALSE  
EFFECTS · 0

## 02 · tri\_party\_airline\_semantic\_architect\_llm

PUBLIC-SAFE SUMMARY · 1/3

Proposed semantic actor topology and  
validation

PUBLIC-SAFE SUMMARY · 2/3

obligations based on BSEP-derived  
bounded context

PUBLIC-SAFE SUMMARY · 3/3

for a pending transaction.

VALIDATION · PASS  
ACCEPTED · TRUE  
ADVISORY ONLY  
AUTHORITY · FALSE  
PERMISSION · FALSE  
EFFECTS · 0

### 03 · client\_purchase\_intent\_reviewer\_llm

#### PUBLIC-SAFE SUMMARY · 1/3

Offer 001 is recommended as it is 24 EUR cheaper and includes a window seat, directly aligning with the client's prioritized soft preferences for lower

#### PUBLIC-SAFE SUMMARY · 2/3

price and a window seat. Both Offer 001 and Offer 002 fully satisfy all client hard constraints, including baggage, no overnight layover, and maximum budget,

#### PUBLIC-SAFE SUMMARY · 3/3

and both are changeable. Offer 002 provides an extra legroom aisle seat at a higher price, which does not align with the stated preferences.

VALIDATION · PASS  
ACCEPTED · TRUE  
ADVISORY ONLY  
AUTHORITY · FALSE  
PERMISSION · FALSE  
EFFECTS · 0

## 04 · client\_profile\_privacy\_reviewer\_11m

### PUBLIC-SAFE SUMMARY · 1/3

Passenger and payment sealed references are opaque, encrypted tokens that protect sensitive personal and financial data,

### PUBLIC-SAFE SUMMARY · 2/3

preventing direct access to raw information. Private-field boundaries define strict access controls and visibility limits for

### PUBLIC-SAFE SUMMARY · 3/3

specific data fields within a client profile, ensuring data minimization and adherence to privacy policies.

VALIDATION · PASS  
ACCEPTED · TRUE  
ADVISORY ONLY  
AUTHORITY · FALSE

## 10 · bank\_idempotency\_risk\_vertical\_cell\_11m

### PUBLIC-SAFE SUMMARY · 1/3

Analysis of duplicate-payment risk,  
idempotency, expiry, TTL, and  
amount/merchant mismatch pressure for  
transaction  
tri\_airline\_purchase:PAR-LIM:2026-08-1  
2:client\_001.

### PUBLIC-SAFE SUMMARY · 2/3

This includes a review of the bank  
projection from  
tri\_party\_airline\_bsep\_packet,  
covering mock authorization amount,

### PUBLIC-SAFE SUMMARY · 3/3

merchant, debtor slot, consent, and  
sealed payment token reference.  
Deterministic final status: PASS.

VALIDATION · PASS  
ACCEPTED · TRUE  
ADVISORY ONLY  
AUTHORITY · FALSE  
PERMISSION · FALSE  
EFFECTS · 0

## 11 · bank\_payment\_status\_explainer\_11m

### PUBLIC-SAFE SUMMARY · 1/3

This explanation clarifies the distinction between mock authorization and settlement processes for transaction

`tri\_airline\_purchase:PAR-LIM:2026-08-12:client\_001`. It emphasizes that

### PUBLIC-SAFE SUMMARY · 2/3

the PaymentStatusReceipt serves solely as evidence of the bank's projection, not as a final action or authority.

### PUBLIC-SAFE SUMMARY · 3/3

The deterministic final status for this transaction is PASS, based on the bank's projection from the `tri\_party\_airline\_bsep\_packet`.

VALIDATION · PASS  
ACCEPTED · TRUE  
ADVISORY ONLY  
AUTHORITY · FALSE  
PERMISSION · FALSE  
EFFECTS · 0

## 12 · tri\_party\_evidence\_consistency\_reviewer\_llm

Supplier B BLOCKED · shipment  
HELD · real payment false · real  
shipment release false

## X1 · 1-4 · PASS

### X1-A01

Airline used 12 live semantic actors, 12 local PASS results, three independent Root decisions, one Corridor, and three evidence-only receipts.

### X1-A02

Airline LLM output influenced semantic selection and routing only; it created no authority, permission, payment, booking, or ticket.

### X1-A03

Airline Package, EVIDENCE\_ONLY Anchor, ANCHORED\_PASS verification, and offline Replay form one immutable PASS chain.

### X1-S01

Supplier used six live semantic actors and six accepted local semantic validations, then preserved nine scenarios with five S1 and four negative rows.

## X1 · 5–8 · PASS

### X1-S02

Supplier A remained limited to the mock path; Supplier B stayed BLOCKED, shipment HELD, receipt EVIDENCE\_ONLY, and the business outcome MIXED.

### X1-S03

Supplier Package, EVIDENCE\_ONLY Anchor, ANCHORED\_PASS verification, and offline Replay form one immutable PASS chain.

### X1-C01

Across both domains LLM semantics remained advisory evidence and Root retained authority.

### X1-C02

Local validation preceded Root acceptance and every Corridor remained bounded by Root-created scope.

## X1 · 9–12 · PASS

### X1-C03

Receipts remained evidence rather than authority in both domains.

### X1-C04

Package bytes froze before Anchor, Anchor bytes froze before Replay, and Replay was offline with no action or effect.

### X1-C05

Raw prompts, raw provider responses, credentials, and private attempts remained unpublished.

### X1-C06

Airline and Supplier have distinct Package, Anchor, anchored-verification, and Replay identities.

## X1 · 13 · PASS

X1-C07

Different actor counts and  
business outcomes do not change  
the shared authority law.

## What public-safe evidence proves — and what it does not

### **PUBLIC-SAFE EVIDENCE**

**18 actor projections**  
**2 Package / Anchor / Replay chains**  
**13 cross-domain claims**  
**All public source hashes**  
**Secret scans · PASS**

### **REQUIRED NON-CLAIMS**

**No production certification**  
**No arbitrary-domain certification**  
**No real integrations or effects**  
**No production PKI or Root attestation**  
**No claim of semantic truth**

Raw prompts, raw provider responses, credentials, and private attempts remain unpublished.
