

Testflix

Real reasoning. Governed action.

A subscription lifecycle with real Gemini responses, four independent Roots and a visible evidence trail.

4

real business effects

A different preference becomes a different action.

With the same EUR 6.50 ceiling, AD_FREE chooses EUR 5.00 / 720p / no ads. QUALITY chooses EUR 6.00 / 1080p / ads. The new plan is consumed by payment, entitlement, session and playback.

01 A full lifecycle

Purchase, reuse, stop, fresh session, expiry and explicit renewal. The main history ends with two mock payments on the same four Hosts.

02 Changed terms are rechecked

Separate P04 controls recompute EUR 6.00 and EUR 7.00 quotes. A EUR 7.00 quote exceeds the original EUR 6.50 consent; the paid period is preserved.

03 The result can be inspected

Captured A/B reproduces the history on fresh Hosts with zero model calls; exactly two mode fields differ. The old disagreement and three transport failures remain visible.

Recorded runtime: first purchase 169.1 s; actual A/B 290.806 s; complete main story 1,174.8 s (19.6 min). These are different scopes, not a latency promise.

Scope: actual gemini-2.5-flash; controlled catalogue, clock, bank, provider and device. No Netflix purchase or real financial transaction. Owner postcommit: 49 tests / 147 passing phases.
