

RADIOLARIA OS

Testflix

**A subscription.
A complete lifecycle.**

Real model responses. Independent decisions.
A preserved, inspectable execution history.

V11 / Accepted 13 September 2026

Conceptual artwork

An ordinary request. A demanding lifecycle.

4

Independent Roots

6

Lifecycle scenarios

2

Preferences, two valid choices

Choose a plan. Pay under current consent. Start playback.
Then ask again, stop, restart, face a new price, expire and renew.

Four different semantic jobs

ROLE	WORK PRODUCT
Intent interpreter	The supplied preference and priorities
Terms analyst	Eligible plans under the explicit price ceiling
Plan selector	A choice that consumes intent and terms
Contract reviewer	An independent check for blocking conflicts

A proposal does not grant payment or playback authority.

Four Roots retain their own authority

ROOT	DECISION
UserRoot	Accept the selection for the user
BankRoot	Review payment against current terms and consent
ProviderRoot	Issue entitlement from the payment receipt
DeviceRoot	Authorize playback for the current session and grant

The model roles advise. Each Root controls its own decision.

The story continues after purchase

SCENARIO	OBSERVED BEHAVIOR
P01 Purchase	Selection, payment, entitlement and playback
P02 Information	Reuse stored results without another effect
P03 Fresh session	Stop and restart without paying again
P04 Repricing	Recompute affected work under current consent
P05 Expiry	Refuse a new start at the exact boundary
P06 Renewal	New consent, new payment, new paid period

P04 is separate controlled public-E evidence; the other story steps use the recorded main history.

AD_FREE PREFERENCE

The first purchase

€5.00

720p / No advertising

CONSENT CEILING

€6.50

OBSERVED PURCHASE HANDLE

2 min 49 sec

The chosen plan is consumed by the action chain.
Payment, entitlement and playback produce linked records.

Reuse information. Refresh authority.

P02 INFORMATION

0

New model calls
New business effects

P03 FRESH SESSION

0

Additional payments
A fresh session still needs a valid
grant.

The same four Hosts preserve their existing histories.

A price change reaches the bank

An old €5.00 packet cannot execute against changed terms.
The consent ceiling remains €6.50.

CURRENT PRICE	PUBLIC E	PAYMENT OUTCOME
€7.00	317.99 seconds	Refused: above the consent ceiling
€6.00	318.91 seconds	Accepted in an independent control

Affected work is recomputed. The existing paid period and retained history are preserved.

Expiry is exact. Renewal is explicit.

AT EXPIRY

The old entitlement
cannot authorize
a new start.

WITH NEW €7.00 CONSENT

2

Payments in the main history:
one purchase and one renewal.

Historical records remain replayable after their authority expires.

One changed preference. A different valid choice.

	AD_FREE	QUALITY
Preference priority	Avoid advertising	Higher resolution
Selected plan	plan:cd79	plan:ab31
Price	€5.00	€6.00
Resolution / ads	720p / no ads	1080p / ads

Same catalogue and €6.50 ceiling. The independent QUALITY branch reaches PLAYING.

The reviewer did disagree

"The upstream selection of 'plan:ab31' does not fully implement the 'QUALITY' preference because it includes ads."

Contract reviewer / Response 13 / Historical input contract

The shared QUALITY contract was clarified. The original refusal remains verifiable against its original input; later responses use the clarified rule.

Continuation preserves the record

20

Recorded attempts

17

Model responses

3

Transport failures

Responses 14 and 15 were retained. Only the missing selector and reviewer were requested again as attempts 19 and 20. Both were consumed.

Cumulative development ledger, not calls per purchase. Failures: two Google 504s and a ReadTimeout.

Captured execution reaches the same result

ACTUAL QUALITY A/B

290.81 s

CAPTURED QUALITY A/B

276.22 s

Same selected plan. Same decisions. Same history content.

Captured run: zero LLM calls. Comparison excludes exactly two declared mode fields. Business effects are local mocks in both executions.

Timing, with the scope kept intact

EXECUTION	RECORDED TIME
Initial purchase handle	169.10 s / 2 min 49 sec
QUALITY A/B	290.81 s / 4 min 51 sec
Captured QUALITY A/B	276.22 s / 4 min 36 sec
Public E repricing controls	317.99 s and 318.91 s
Full main purchase-to-renewal story	1174.80 s / 19.6 minutes

The complete main story includes renewal and replay. P04 is separate. These are observations, not an SLA.

Common mechanisms. A specific domain.

REUSABLE MECHANISM	TESTFLIX INPUT
Typed work and result consumption	Catalogue, preference and selected plan
Independent Root authority	User, bank, provider and device decisions
Currentness and retained recomputation	Changed price, time and existing paid period
Continuation and preserved history	Reuse, new sessions and explicit renewal

This demonstrates reuse in a reviewed domain; arbitrary-domain universality is not claimed.

Accepted code. Recorded evidence.

49

Post-commit tests passed

147

Post-commit phases

51

Accepted repository paths

ACCEPTED MAIN COMMIT

e42d37fa98dfec7110b8cf75b1aceaa614f461be

Preparation: 82 tests, 246 phases and 8 process controls. Owner commit and push were confirmed.

The scope is visible

ACTUAL EXECUTION

Gemini 2.5 Flash responses
Public kernel and Host execution
Independent Root reviews
Captured reexecution and source
hashes

CONTROLLED ENVIRONMENT

Finite catalogue and local test clock
Mock bank payment
Mock provider entitlement
Mock device playback

A live Netflix purchase, external time attestation and production certification are outside this claim.

An inspectable demonstration

START WITH	THEN FOLLOW
README and story.html	A readable guide to the story and its boundaries
Technical Appendix	Exact source lineage, records and interpretation
Claim evidence JSON	Each claim mapped to its supporting records
LLM reader XML	One portable file for a first external review
