

Computing, assembled around intent.

**A working domain.
External meaning.
Independent authorship.**

Reference implementation

Synthetic venue · amended authoring protocol

Engineering accepted 25 September 2026

Three subjects explain one connected result

A new program used another owner's evidence to arrange the requested sessions.

F / FOOTBALL

What work actually happened?

Intent, a permitted change, three recorded reservations.

D / EXTERNAL DRS

How did external meaning become useful?

An address led to evidence that a local Work consumed.

A / AUTHORIZING

Who built the new program?

A bounded author created it. Separate reviewers admitted it.

The program was built first, then used

Construction and execution have separate decisions and separate evidence.

DESIGN TIME

RUN TIME

The running system did not discover, write and install its own football program.

The request was three training sessions

A real planning need supplied the story. The venue, inventory and prices are synthetic.

JANUARY 2027	REQUESTED TIME	DURATION
7 January	16:30–18:00	90 minutes
8 January	11:00–12:30	90 minutes
9 January	11:00–12:30	90 minutes

Natural grass. Full-size pitch.

€70.00 budget

Europe/Tirane civil times. Budget: 7,000 minor EUR.

The exact request had no complete offer

The program preserved all requested hours and reported the missing fit.

ACTUAL INTENT	ACTUAL JSON FIELDS	OBSERVED RESULT
Three sessions at exact times	FIND_OFFER allowance [0, 0, 0]	No complete offer
The owner supplied the dates, duration and hard conditions.	gemini-2.5-flash returned parameters for the program.	Producer and consumer Work completed the same request.

One permitted change opened a valid offer

Only 8 January received a 30-minute allowance. Other conditions stayed fixed.

DATE	REQUESTED	ACCEPTED OFFER
7 January	16:30–18:00	16:30–18:00
8 January	11:00–12:30	11:30–13:00
9 January	11:00–12:30	11:00–12:30

allowance [0, 30, 0]

€63.00 / €70.00

$3 \times 2,100 = 6,300$ minor EUR. Permission to shift did not authorize booking.

One owner produced the offer; another used it

Two native Work results are joined by an external, source-bound exchange.

VENUE ROOT

EXTERNAL DRS

REQUESTER ROOT

Venue Work

Computes an offer
from its inventory

Signed exchange

Offer body and
current source status

Requester Work

Consumes the
verified context

Each local Root retains its own decision. The exchange carries evidence.

Separate consent created one recorded booking

The registry owner executed one native MOCK action for all three accepted slots.

The saved receipt agrees with an independent read of the registry.

Repeating confirmation preserved the same result

A second confirmation returned the existing receipt without another effect.

EXACT	SHIFT	CONFIRM	REPEAT	VERIFY
No complete offer	Offer ready	Book three slots	Same receipt	History verified
0 new effects	0 new effects	1 effect	0 new effects	0 new effects

One dispatch and one execution across this five-event main story.

Verification selected a different operation

The consumed proposal requested existing history and readback.

ACTUAL RETURNED OPERATION

VERIFY_EXISTING

Prepared first

All three model proposals preceded native booking.

Consumed later

The program read the actual existing result. No new booking.

Sixteen native cases used the same final program

The cases vary useful work, rights, source state and history.

Useful work	Main and low budget
Rights	BOOK, history and release
Current source	Revocation, audience and revision
Variation / history	Other team, order, occupancy, continuation

NATIVE	16 cases / 56 events / 7 mock starts
LIVE	3 provider calls / 5 events / 1 additional mock start

An address travels without the whole memory

External DRS connects a limited descriptor to material that stays with its owner.

OWNER A

Rich local material

Traces, results and source history stay under its policy.

ADDRESS / INDEX

Bounded descriptor

Type, provenance, time, scope and allowed metadata.

OWNER B

Permitted fragment

A local Work consumes a checked source context.

DNS is an analogy for addressing, not a claim of DNS wire compatibility.

Discovery, disclosure and use are distinct decisions

A found address carries neither a disclosure grant nor a local decision.

Caller, request, scope and budget bind this exchange. No shared SuperRoot.

Evidence gained context while keeping its result

Three representations have different causal positions and independently checked links.

E

Work result

Computed offer

B

Published evidence

E + Work / review refs

C

**Consumption
context**

B + authenticated
status

B.offer = E

C.body = B

Original result preserved

New evidence changed 96 into 102

The receiving readings and local limit stayed the same.

SOURCE REVISION 1

$$106 - 10 = 96$$

Correction from A: -10

Within local limit 100

SOURCE REVISION 2

$$106 - 4 = 102$$

Correction from A: -4

Review required at limit 100

The earlier 96 remains history. Accepting an accurate report does not erase the limit.

Revocation survived a process restart

The new requester process retained source state, budgets and prior history.

- | | | |
|-----------|------------------------------|--|
| 01 | Record REVOKED | Persist the terminal source state before refusing use. |
| 02 | Restart requester B | Reject the old ACTIVE state as a rollback. |
| 03 | Use a lawful revision | Apply new evidence while retaining the earlier result. |

Observed process restart. Whole-machine snapshot rollback is outside this result.

Budgets bound retrieval and preserve failed experience

The source can refuse a fetch before releasing its body.

G52 BASELINE	ATTEMPTS	ALLOWED / DENIED
Metadata	8	8 allowed
Payload	4	2 allowed / 2 denied
Total	12	2 bodies / 2,146 bytes

Duplicate delivery: one source, one history, zero credit.

Scoped negative history can guide a later lawful continuation.

Two subjects used the same exchange rules

Calibration and football supply different meaning through a shared, versioned profile seam.

CALIBRATION

**Correction value
with its source basis**

SHARED EXCHANGE

**Address / disclosure
Time / provenance
Local consumption**

FOOTBALL

**Offer and status
with their source
basis**

G52 historical lifecycle

The protocol transfers. The history does not claim every byte was unchanged.

G53 accepted profile seam

The author received a construction contract

General HOW and a separate football WHAT defined the task.

HOW TO BUILD

WHAT TO BUILD

Work and Root
External DRS
Schemas and code anchors

Natural full-size field
Three 90-minute sessions
Time changes need consent

Different-domain numerical and MOCK examples

Hidden examiner and target solution stay outside the author input

The author could edit code, not admit it

Construction, execution and acceptance have separately recorded boundaries.

AUTHOR

**Creates
candidate
through seven
tools**

BROKER

**Records
→ bounded
operations**

REVIEW / EXAM

**Reviews sources
→ and native
results**

OWNER

**Admits exact
→ bytes
through
unchanged R1**

gpt-6-astra / ultra / default

The reviewed runner and observer are trusted code, not a hostile-Python security claim.

Recorded operations reconstruct the authored files

Authorship rests on exact byte reconstruction, not a name in a report.

The coordinator did not add implementation patches. Tool operations are not model calls.

The successful continuation is explicit

Earlier incomplete trials retain their original status.

G54B1

INCOMPLETE

Initial + 3 corrections
Contract mismatch

G54D

INCOMPLETE

New cold trial, initial + 3
Native 15 / 16

G54D1

ACCEPTED

Restored continuation
Authorized correction 4

No new cold start. No claim that the unavailable prior model state was recreated.

The final correction supplied the missing Root refusal

The technical examiner predicates stayed unchanged between D and D1.

BEFORE / G54D

AFTER / G54D1

**Correctly stopped
without booking**

**Authenticated REVOKED
Real Root refusal
No BOOK or registry change**

Required Root decision missing

BLOCKED_FAIL_CLOSED

Independent implementation tested the instructions too

The early envelope mismatch led to a general, versioned repair.

- | | | |
|-----------|--|---|
| 01 | B1 exposed a contradiction | The required publication envelope referred to events that had not happened yet. |
| 02 | The contract changed by version | Work result, publication and checked context gained distinct E / B / C roles. |
| 03 | A numerical probe preceded D | An independent domain example tested the repaired handoff. |

Frozen does not mean infallible. Preserved failures remain part of the evidence.

The kit transfers a way of building a new domain

A developer can pair the general construction contract with a new subject.

GENERAL HOW

Laws and interfaces

Work, Root, DRS,
provenance,
time and machine schemas.

NEW WHAT

Subject requirements

Inputs, constraints and the
needed outputs stay explicit.

SEPARATE ACCEPTANCE

Candidate review

The owner decides whether
and how exact code is
admitted.

One working subject profile is demonstrated. The built-in Factory remains future work.

Gate 5 has an admitted engineering result

G55L committed, pushed and independently read back the accepted source.

64f2b38b0d671e49

Admit Gate 5 reference DRS and authored football domain

13

shared additions

24

author-package files

212

total new paths

Engineering admitted. G56 publication receives a separate status.

Saved work can be inspected without repeating it

Pure verification checks the recorded evidence without new domain effects.

G54D1 / TWO SUPPLIED RESULTS

G55L / INSTALLED PROOF

32,702 bytes

37,389 bytes

**The two results match
byte for byte.**

**Matches its own expected
canonical result.**

Verification reads data and runs declared pure subprocesses. No new model or native execution.

Addressable experience can connect independent systems

Gate 5 shows the foundation. Wider cooperation remains an architectural extension.

OBSERVED IN GATE 5

ARCHITECTURAL EXTENSION / NOT EXECUTED

Work creates new conclusions. An index only helps locate and connect their sources.

Future capabilities can retain local ownership

A service description can support remote use or a separately admitted local implementation.

DEFERRED DIRECTIONS

Reflective improvement
Cross-domain transfer

Cognitive Radiolaria
Capability Synthesis Factory
Global discovery / federation

Inspect the work and follow its evidence

Three independent reading routes share one source corpus and construction contract.

F

Football Domain

Reader + source index
